1 Scope

This Policy clarifies the Rules of Registration in relation to first entering on to the Register, ongoing requirements, sanctions and communications.

Section 3 'Guidance on the Rules of Registration' has specific subsections providing additional guidance to each of the areas within the Rules of Registration.

This policy should be used to guide and inform stakeholders on the interpretation of the Rules that will be applied in relevant circumstances by Gas Safe Register.

Note: All Gas Safe Register published policies and other supporting documents, such as the Inspection Factsheet, can be viewed at:

www.GasSafeRegister.co.uk/policies

2 General communications

1. To keep the service as cost effective and environmentally sustainable as possible Gas Safe Register will use electronic means of communication with registered businesses as the preferred method wherever possible for example, if a business applies for registration or when a registered business renews online the e-mail address provided will be the primary method used for all future communications.
2. It will be assumed that the e-mail address provided is current, correct and that of the responsible person for the registered business.
3. Where Gas Safe Register receives notification of undeliverable e-mail a hard copy letter will be sent or a telephone call will be made to the registered business address or listed telephone number.
4. Where a registered business has no e-mail account an alternative method of communication will be used. Gas Safe Register reserves the right to apply additional charges to businesses that register or renew using the preferential online charges but which subsequently do not use electronic communication.
5. It is the responsibility of the registered business to monitor all communications from Gas Safe Register and act on the content in a timely manner as required and as appropriate.
6. The registered business retains responsibility for ensuring that information is communicated internally within the business.

7. It is the responsibility of the registered business to ensure that their contact details and e-mail address are accurate and kept up to date. Any changes being advised to Gas Safe Register within 5 business days.

3 Guidance on the Rules of Registration

3.1 SECTION 1 - The registered business

1. By registering with Gas Safe Register the registered business is agreeing to comply with the Rules of Registration and all other supporting policies and guides. Failure to comply with the rules may result in sanctions being applied to the registration in accordance with the Gas Safe Register Sanctions Policy.
2. The business registration must have in place a single responsible person that is responsible for the business registration, any operating centres and for any gas work undertaken or controlled by or under that registration.
3. Gas Safe Register must be informed in writing, via telephone or online within five business days of any changes
 - to the legal entity of a company;
 - of the dissolution of the limited company;
 - to the trading title of the registered business, limited or otherwise;
 - to the change of ownership of the business, limited or otherwise

Gas Safe Register will then send you a Change of Trading Title pack which must be completed and returned with any required supporting information within 5 business days of the postal date. If this is not done within these time scales, the registration will be archived.

Note: *Change of trading title forms can be returned via the postal system or scanned and sent via email.*

4. In addition to the changes referenced in paragraph 3 above, Gas Safe Register must be informed of any changes relating to the registered business in writing via telephone or online within 5 business days of any change, examples being:
 - being served a Health and Safety Executive (HSE) notice of contravention, improvement notice or prohibition notice relating to gas work; or
 - pending prosecutions or criminal convictions;
 - responsible person and engineers etc.

Note: *Changes made via telephone must only be made by the responsible person as the main contact for the registered business or a named contact listed against the registration. When Gas Safe Register is advised by telephone*

of a business change we will send, the relevant forms to the responsible person, which must be completed and returned within 5 business days of the business receiving them.

Information held about a registered business and how it will be treated by Gas Safe Register is set out in the Privacy Policy.

Applications for registration will not be accepted where the applicant is subject to an HSE notice of contravention, improvement notice or prohibition notice or any 'live' suspended custodial sentence related to gas work. Where an applicant has served a custodial or suspended sentence which was related to gas work, all applications for registration in these circumstances must be made in writing and be accompanied with official evidence confirming that the sentence is spent or the prohibition notice has been lifted.

3. The registered business trading name must be and remain the name registered with Gas Safe Register. Where it is identified that a registered business is advertising with the Gas Safe Register brand and a trading name different to that entered on the register, the Brand Enforcement Policy will be followed.
4. Where a change of ownership takes place to the business it should not be assumed that the registration will automatically transfer to the new owner. In the majority of cases a new registration will be required.

Note: *Please see Annex 1 of this Policy for further detail in relation to trading title and acquisitions.*

5. The business address should be the main address from which the registered business controls gas work.
6. Where a business ceases to trade, goes into administration or is liquidated, and we have documented evidence of this, we will arrange for the registration to be cancelled.

3.2 SECTION 2 - General responsibilities

1. All gas work should be carried out competently and safely in accordance with the relevant gas safety legislation, such as the Gas Safety (Installation and Use) Regulations 1998 (GSIUR) in Great Britain (GB), relevant Building legislation* and appropriate industry Standards as listed in the Normative Document List as published by Gas Safe Register (Technical Bulletin 999).

**Appropriate to the geographical area*

2. Registered businesses are required to hold sufficient copies of, and be able to demonstrate that they are applying the requirements and guidance of the most current edition of the Gas Industry Unsafe Situations Procedure (GIUSP). Where this cannot be demonstrated a defect notice against the business will be raised.
3. Registered businesses are responsible for all gas work carried out in the name of the business by their employees, whether employed directly or indirectly i.e. subcontracted.
4. Registered businesses must ensure the engineers under their control whether employed directly or indirectly are registered and hold the appropriate work categories for the work they carry out.
5. Any gas work undertaken under a specific registration number must be carried out in the name of the business holding that registration. This also applies in relation to any documentation issued by the registered business e.g. Landlords Gas Safety Records.

Note: *Although it is not a requirement of GSIUR or the Rules of Registration, it is advised that all registered businesses hold appropriate levels of insurance for all activities undertaken by the registered business to protect their customers and themselves e.g. Public Liability Insurance (PLI).*

6. A registered business may be a controlling group entity consisting of a number of other businesses operating within a group business structure. In these situations all gas work must be carried out in the name of the registered group entity and under the controlling registered business' registration number. All engineers undertaking gas work in these circumstances must carry a licence card showing the name of the registered business in whose name the gas work is being carried out (See Rules of Registration, Section 2, clause (e)).
7. Where an individual business carries out gas work as part of a controlling group entity, but uses a different business name to that of a registered group entity, the individual business is required to hold its own registration with Gas Safe Register.
8. Where an engineer leaves the employment of a registered business, that business must advise Gas Safe Register in writing, via telephone or online, within 5 business days and return the engineer's licence card.
9. The following are examples of what may constitute 'bringing the Gas Safe Register into disrepute'. This is not an exhaustive list but should be considered as indicative:
 - a. Poor quality levels of gas related workmanship.

- b. Failure to correct defective gas work.
 - c. Misuse of the Gas Safe Register brand (i.e. use outside published guidelines). This includes the use of any branding similar in colour or style to the Gas Safe Register brand or the use of the logo of the previous gas registration scheme which may cause confusion.
 - d. Using unregistered engineers to carry out gas work or signing off others' gas work as your own.
 - e. High levels of justified customer complaints (pro rata to the volume of gas work carried out).
 - f. Failure to inform Gas Safe Register of any improvement action, enforcement action and/or prosecution taken against the registered business and/or engineer (pending or otherwise).
 - g. Airing vexatious grievances against Gas Safe Register within the public arena without justification.
 - h. Using the registration details of employing businesses illegally or inappropriately.
 - i. Failure to appropriately manage gas work undertaken either directly or indirectly (sub-contracted) on behalf of the registered business.
 - j. Activities within the public domain that result in successful prosecution or enforcement action, including formal agency notification (e.g. Multi-Agency Public Protection Arrangements group) of an engineer representing a danger to the Public
 - k. Failure to co-operate fully with any investigation by our or the relevant enforcement body's inspectors.
10. Gas Safe Register retains the right to make the final decision on what constitutes bringing the Register into disrepute and each occurrence will be judged on a case by case basis.
11. Gas Safe Register bears no liability financial or otherwise for the contingent services provided, or not provided, such as the 'Find a registered gas business' web check service.
12. To access the web services provided by Gas Safe Register registered businesses are provided with a secure Personal Identification Number (PIN). Once issued, the security and use of this PIN becomes the sole responsibility of the registered business to which it has been issued. Gas Safe Register will not be responsible for any security or damages arising from the misuse of the PIN.
13. In all matters relating to a failure to meet the General Responsibilities sanctions may be applied in accordance with the Sanctions Policy.

Undertaking gas work

An engineer may only use the details of the registered business by which they are employed to undertake gas work. An engineer who does not hold their own personal registration may not use the details of his employer (or any other registration) to undertake gas work outside their terms of employment e.g. on a private basis or “in their own right”. This is a breach of:

- The Gas Safety (Installation and Use) Regulations 1998 In GB
- The Gas Safety (Installation and Use) Regulations 1994 as amended and applied by the Gas Safety (Application) Order 1996 in Isle of Man
- The Gas Safety (Installation and Use) Regulations (Northern Ireland) 2004 in Northern Ireland.
- The Health and Safety (Gas) (Guernsey) Ordinance 2006 in Guernsey.

To maintain a valid registration a registered business must always have a minimum of one engineer holding current certificates of gas safety competence listed against the registration to allow the business to carry out gas work in its chosen field of work. A registered business with no listed engineers will automatically have its registration status changed to ‘not registered’ on web searches and will not be legally able to undertake gas work. There are no refunds of fees for these situations.

Licence cards

1. Gas Safe Register will provide each engineer with a licence card which includes:
 - the registration period start and end dates.
 - a photograph of the engineer
 - the engineer’s name
 - the engineer’s licence card number
 - a list of work categories with end dates
 - the registered business name and registration number
2. Engineers are required to carry an up to date licence card showing the name of the registered business in whose name the gas work is being carried out.
3. Engineers should promote and encourage the use of the licence card.
4. Engineers should show the licence card when asked.

5. Engineers must let Gas Safe Register know straight away if their licence card is lost or stolen.
6. The licence card should be returned to the engineer's employer or Gas Safe Register when an engineer's employment ceases and they no longer work for the registered business the card is held for.
7. The photograph on the licence card should be an accurate representation of the person holding that card.
8. Businesses are responsible for ensuring that photographs uploaded via the Gas Safe Register website are verified and a true representation of the engineer.
9. Businesses are also responsible for ensuring that licence cards are updated/renewed following the renewal of any existing certificates of competence or attaining additional gas competence certificates e.g. ACS or GCS.

Note: *Gas Safe Register holds details of every engineer's current gas qualifications. These are received electronically from the relevant Certification/Awarding Body. To make the engineer's qualifications easy for everyone to understand and check, they are summarised into work categories used on the website and licence card. For example 'Central Heating DOM NG' is summarised as 'Gas Boilers' aiding a consumer in identifying what appliance a registered engineer is able to work on.*

Work records

Notwithstanding any legal or normative requirements for records, registered businesses and anyone carrying out gas work on their behalf must make sure that records are kept and given to Gas Safe Register when requested (*See Rules of Registration Section 2, clause (s)*). These records must be retained for at least 6 years and accurately record the following as a minimum:

- a. The name of the person doing the gas work
- b. The Gas Safe registration number under which the work was carried out
- c. What the gas work was. This should include: the appliance make, model and location; and positive recording of essential gas safety checks and test results carried out. Where applicable, record:
 - Flue operational checks
 - Provision of ventilation
 - Operating pressure and/or heat input

- Safe and correct installation and operation of the appliance/installation
 - Combustion analysis readings
 - Tightness test results
- d. The date the work was completed
- e. The address where the gas work was done
- f. The actions taken for unsafe situations

Work records must be signed by the person carrying out the work confirming that the information captured is true and accurate.

Note: *Registered businesses/engineers carrying out gas work as a sub-contractor to another registered business must use their own registration details on any customer facing documentation. Registration details of the main contractor under whose name the work is done may also be additionally shown on supporting documentation.*

3.3 SECTION 3 - Probationary registration

Probationary registration will remain in place until Gas Safe Register is satisfied that work being carried out by or under the control of the registered business and within scope of the relevant gas safety legislation is being performed correctly, safely and to the appropriate standards.

1. The probation period will commence from the time the business has been accepted on to the Register.
2. The probation period will last for approximately 3 months from the time the registered business has been entered on to the Register.

Note: *The registered business must retain records of **all** gas work completed by the registered business (as per the ongoing requirement in Section 2 of the Rules of Registration).*

3. Once registered a mandatory probationary inspection appointment will be arranged with the registered business within the 3 month period. A maximum of 2 appointments will be made for mandatory probationary inspection to take place.
4. Failure to keep mandatory probationary inspection appointments will result in suspension and possible removal from the Register, forfeiting all fees paid. From the date of a suspension from the Register being applied, the business has 30 business days to arrange and keep an alternative mandatory probationary inspection date. Failure to keep this final appointment will result in removal from the Register, forfeiting all fees paid.

5. Probationary registration will remain in effect until satisfactory gas work undertaken by the registered business has been successfully inspected.
6. Gas Safe Register reserves the right to extend or reduce the duration of the probationary status of a registered business dependent upon any pre-existing registration history or failure to demonstrate gas work to the required standards.

Probationary registration specific communication

1. Upon a satisfactory application resulting in probationary registration status a welcome pack and licence card(s) will be issued to the business.
2. The registered business will be informed of the time and date for the mandatory probationary inspection appointment.
3. It will be confirmed to the registered business when the requirements of probationary registration have been met and the probationary status has been removed.
4. Where sanctions are applied this will be communicated as per the Gas Safe Register Sanctions Policy.

3.4 SECTION 4 - Inspecting gas work

1. Gas Safe Register will use work inspections to establish that the work carried out by registered businesses/engineers is correct and safe against the requirements of relevant gas safety legislation, manufacturers' installation/servicing instructions, industry normative documents and aspects of relevant Building legislation and guidance documents e.g. the Domestic and Non-domestic Building Services Compliance guides as appropriate.
2. Work inspections will be carried out by a Gas Safe Register Inspector. These inspections will be either accompanied or unaccompanied by the registered engineer or a representative of the registered business that undertook the gas work in accordance with the wishes of the property owner.
3. There are four main types of work inspection applied by Gas Safe Register:
 - a. **Installation** – *This type of inspection encompasses work that has been notified to Gas Safe Register or is nominated for inspection by a consumer.*
 - b. **Business** – *This type of inspection encompasses: servicing, maintenance activity and landlord gas safety checks, as well as*

mandatory probationary inspection and inspection where previous inspection/complaint activity has highlighted concerns over an engineer's application of competence.

- c. **Complaint** – *This type of inspection forms the basis of an investigation into the standards of gas work that has been carried out by a business, either registered or unregistered, following a complaint allegation being received*

- d. **Competence** – *This type of inspection arises as a possible outcome of the other inspection types mentioned above and could consist of further site visits and/or planned attendance at a theory-based inspection event(s). Competence inspections are designed to target particular concerns that may include, individual engineer(s) or types or categories of work carried out. Within a competency inspection Gas Safe Register may ask to see targeted types of work and/or use verbal competency questioning.*

Note: *Gas Safe Register reserves the right to commence inspection activity that could include any of the above where information, such as included within RIDDOR, is received from external sources such as an Enforcement Body.*

- 4. Where an inspection is accompanied the relevant checking and testing will be carried out by the registered engineer as required by the Gas Safe Register Inspector.

- 5. Registered businesses and their engineers will be expected to demonstrate their competence periodically through our inspection process. Gas Safe Register will engage with businesses to monitor the application of gas safety competence against the work categories they are registered for.

- 6. Failure to allow a work inspection without a justified reason will be considered as a breach of the Rules of Registration and will attract appropriate actions in accordance with the Sanctions Policy.

- 7. Where defective or non-compliant work is discovered during inspection activity the issues will be reported in a defect notice served to the responsible business. All identified defects are recorded even if the work is corrected by the engineer during the visit. This is done to ensure an accurate view of defects on gas work is held and that trends can be monitored, reported and reacted to. We will monitor for the completion of the remedial action and when requested we can arrange to re-inspect any remedial action where there has been unsafe gas work attributed to a registered business. Failure to correct work identified on a defect notice will attract appropriate actions in accordance with the Sanctions Policy.

Note: *Where through inspection activity of any type it is established that a registered business or engineer has worked outside the scope of their work categories and has created gas safety defects, a defect notice will be issued. Where this is the case, the business will be responsible for the correction of the defects and will need to engage a suitably registered and competent engineer/business for the remedial action.*

Where, through inspection activity of any type, it is established that a registered business or engineer commissioned the work of an unregistered gas worker, resulting in gas safety defects, a defect notice will be issued. The registered business that commissioned the work will be responsible for the remedial actions.

8. A registered business will retain full responsibility for any outstanding defective work issues including those attributable to any previous business registration(s) held.

Inspecting gas work specific communication

1. The registered business will be advised, where possible, in advance of inspection visits by Gas Safe Register. Timescales can be flexible and reflective of risk drivers.
2. Any pre-existing gas safety faults will be dealt with in accordance with the GIUSP by the Gas Safe Register Inspector on unaccompanied inspections and by the registered business on accompanied inspections.
3. Upon completion of a work inspection a factual and impartial report may be provided to the registered business, the customer and where applicable, the landlord for the property. The report may include a description of any gas work defects and/or Building Regulation non-compliances encountered and attributable to the registered business being inspected along with timescales for actions where applicable.
4. Where the Gas Safe Register Inspector is accompanied by a representative of a registered business who is not a registered engineer and faults have been identified the opportunity will be taken to discuss the fault and requirements for the necessary rectification work and confirm timescales for corrective remedial work.
5. Where the Gas Safe Register Inspector is un-accompanied by a representative of a registered business and issues have been identified we aim to contact the business to discuss the requirements ahead of any report being received. If this has not been possible and the registered business needs to discuss the report content, upon receipt they should contact Gas Safe Register without delay.

6. Where sanctions result these will be applied in accordance with the Sanctions Policy.
7. Gas Safe Register reserves the right to pass relevant information to appropriate enforcement agencies and support investigation.

3.5 SECTION 5 - Complaints

Gas Safe Register will impartially and robustly investigate all complaint allegations about registered businesses/engineers in accordance with the authority and contractual remit it operates within. Where sufficient evidence supports that unsafe gas work or other breaches of the Rules of Registration or Policy have occurred, appropriate and proportionate sanctions as set out in the Sanctions Policy will be applied during or subsequent to a complaint investigation.

1. Where a complaint investigation finds issues beyond the scope of Gas Safe Register's authority and remit we will take steps to signpost the complainant to the relevant organisation(s) and/or supply enforcement agencies with information about the complaint.
2. Where gas appliances or gas pipework have been dismantled or removed prior to inspection/investigation and/or where rectification work has been completed, Gas Safe Register reserves the right to inspect a business or engineer(s) if concerns relating to applied gas safety competence or standards might exist.

3.6 SECTION 6 - Sanctions, suspension and removal

Gas Safe Register reserves the right to impose sanctions on any registered business and/or individual engineer. Please refer to the Gas Safe Register Sanctions Policy for further information.

1. A sanction will primarily be applied for failure to deliver gas safety and/or operate in accordance with the Rules of Registration or Registration Policy.
2. Gas Safe Register will advise the registered business and/or engineer of what actions are required to enable the lifting of any sanction(s) or the criteria for reapplication following removal.
3. Failure to demonstrate that the registered business or engineer is working to the standard expected by Gas Safe Register may result in the removal of the registered business and/or engineer from the Register.

Note: *A business and/or engineer that has been removed from the Register may reapply, however they will need to satisfy Gas Safe Register that they*

have complied with the criteria set for reapplication and meet the gas safety standards expected. Gas Safe Register also reserves the right to apply conditions to any new registration or to reject an application where a higher power such as an enforcement agency or court has placed a ban preventing them from carrying out gas work.

Sanctions Specific Communication

Please refer to the Gas Safe Register Sanctions Policy.

3.7 SECTION 7- Fees and charges

1. Where a registered business is declared insolvent or is dissolved for any reason, the controlling entity/person(s) will remain responsible for the payment of any outstanding fees or charges relating to the dissolved business.
2. New applications for registration will be withheld until all outstanding fees and charges relating to pre-existing or previous registrations have been paid in full.
3. Where a registered business does not renew before or upon the anniversary of their registration they will be liable to the application of a penalty fee at a level determined by Gas Safe Register, please refer to the Sanctions Policy.
4. Where an engineer requires an updated/replacement licence card, during the registration period, a fee will be applied at a level determined by Gas Safe Register.

The current schedule of fees can be found on the Gas Safe Register Engineers website, www.gassaferegister.co.uk

3.8 SECTION 8 - The Gas Safe Register Brand

1. When advertising and using the Gas Safe Register Brand, a business must only use the trading name registered with Gas Safe Register. Where it is identified that a business is using a different trading name to that registered, the Brand Enforcement Policy will apply.
2. Where a group of companies are registered under one registration using the group name, any documentation displaying the Gas Safe Register Brand must reflect the trading name registered. Other businesses within the group who operate using a different trading name are not permitted to use the brand and in cases where this occurs that business would be required to be registered in its own right.

Please refer to the Brand Enforcement Policy for further information.

3.9 SECTION 9 - Reporting Notifiable Building Regulations work through Gas Safe Register

Gas Safe registered businesses have a legal duty to comply with both the technical and procedural requirements of the respective Building legislation for the geographical areas covered by Gas Safe Register. In England and Wales registered businesses must report/notify the installation and commissioning of all heat producing gas appliances e.g. boilers, fires, water heaters etc. and any heating or hot water system also installed and served by the appliance through the facilities provided by the Register.

4 Suggestions for improvements to the service provided by the Register

Gas Safe Register is committed to continual improvement and accepts suggestions on how we may improve our service within our defined remit. If you have a suggestion that you would like us to consider please let us know by telephone, letter or email addressing any written correspondence for the attention of the Business Improvements Manager.

5 Complaints against the Register

Every year Gas Safe Register deals successfully with tens of thousands of registered businesses and consumers. We aim to provide a high level of service to all our customers but sometimes things can occasionally go wrong or your expectations are not always met.

If you have a complaint about the way we have dealt with you or about any of our services we want to know. We always welcome feedback and suggestions to help us improve our performance. Information about the Register, how we operate and how to make a complaint against our service is available at <https://www.gassaferegister.co.uk/who-we-are/our-policies/>

6 Communication with Gas Safe Register

You can contact us by telephone, letter or email. If however for the purpose of accessibility you have any reason why these methods of communication are not suitable, please let us know so that reasonable adjustments can be made to aid your communication with us or access to our services.

7 Definitions

These definitions have been created for the purposes of supporting use and understanding of this particular Policy and are supplementary to those in the Rules of Registration:

Controlling Group Entity	An overarching business owning or responsible for a number of other separate businesses.
Entity	A business having real and distinct legal personality.
Gas Related Workmanship	This includes gas work as defined within the scope of the Gas Safety (Installation and Use) regulations 1998, but may include such work as related to the installation of a gas appliance, such as compliance with relevant Building Services Compliance Guides etc.
Gas Safety Legislation	GB – The Gas Safety (Installation and Use) Regulations 1998 NI – The Gas Safety (Installation and Use) Regulations (Northern Ireland) 2004 IOM – The Gas Safety (Installation and Use) Regulations 1994 as amended and applied by the Gas Safety (Application) Order 1996 Guernsey – The Health and Safety (Gas) (Guernsey) Ordinance 2006
Licence Card	A card we provide annually for each engineer which includes registration start and end dates, a photograph of the engineer, the engineer's licence number, the list of gas competence derived work categories with start and end dates, the registered business's name and registration number.

8 Annex 1 – Trading Titles

A registered business is only permitted to carry out gas work under the trading name with which it is currently registered with Gas Safe Register and this trading name should be the name which appears on all headed paper, advertisements, websites, van stickers, invoices etc. This trading name is the only name a registered business is permitted to associate with the Gas Safe Register brand. The following information will demonstrate how businesses can meet this requirement when an acquisition or incorporation takes place:

8.1 Acquisitions

Gas Safe registrations are not transferrable.

- Where a change in control and ownership of a business occurs, the Gas Safe registration remains with those who control and ownership has passed from, and they must decide whether or not they need to continue being Gas Safe registered. If not, they must notify us in writing, requesting that the registration be cancelled. After cancellation the registration number will not be reused for this or any other registration.
- The new owners of the business will need to ensure that their new business is correctly registered with Gas Safe Register, under a new registration, before any gas work is carried out following the acquisition.

There are currently three options available to businesses/groups where acquisitions occur:

Option One: if the acquirers are already Gas Safe registered, they can incorporate the new business/engineers into their existing Gas Safe registration. Any gas work will then be carried out under the trading name and registration number with which the acquirers are already registered.

Option Two: The acquirers apply for a new registration and register the newly acquired business.

Option Three: The acquirers do not register the new business with Gas Safe Register but sub contract any gas work out to other registered businesses.

Note: *In Option 3 the business will not be permitted to use the Gas Safe brand or advertise/state that the business is registered to carry out gas work.*

Gas Safe Register - Registration Policy

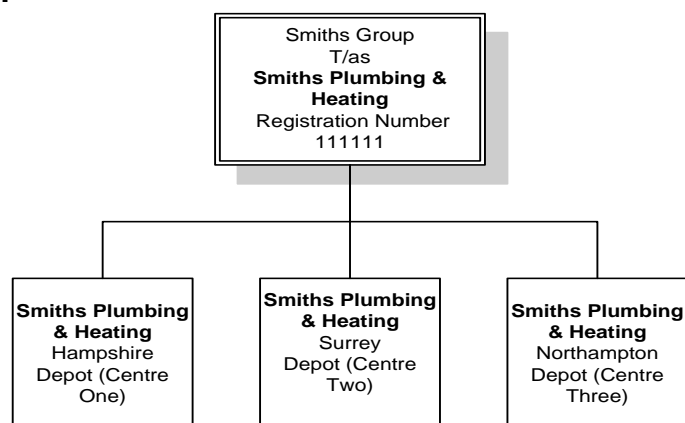

A business is only permitted to have one trading name per registration. Where a business carries out gas work using more than one trading name each business will need to be registered separately with Gas Safe Register.

The same applies to businesses within a group structure. Where each business within the group carries out gas work under the **same trading name** (see *example one below*) the group can register under one registration with multiple operating centres; all using the same registration number.

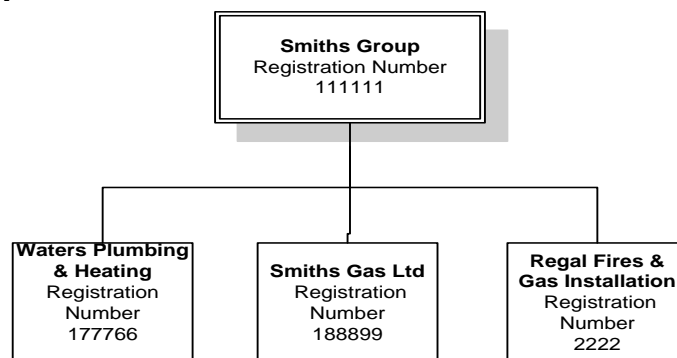

However, where a group structured business has a number of different businesses, carrying out gas work using different trading names (see *example two below*) each business will need to be registered separately with Gas Safe Register.

8.2 Group Structured Businesses

Example One:

Example Two:

8.3 Limited Companies

Limited Companies are legal entities registered at Companies House. Registrations belonging to Limited companies are not normally transferrable from one legal entity to another or able to have the name changed. However, where a change of name has been registered at Companies House and the Limited company retains the same companies house registration number a change of trading name to the registration can take place providing a copy of the Certificate of Incorporation on Name Change is provided and change of trading title forms are completed.

If a Limited Company ceases to trade, goes into liquidation, administration or receivership, following notification of this, arrangements will be made to remove the registration from the Register.
